

Supplemental Appendix for: Student Loan Debt and Participation in American National Elections

Appendix A: Detail on Variable Creation and Coding

- Variable Information for the CES (pooled 2016 and 2020) - Pages 1-5
- Variable Information for the 2019 ANES Pilot - Page 6

Appendix B: Various Tables and Additional Analyses

- Table B1 - Page 7
Models that replicate my main analyses by using probit instead of OLS
- Table B2 = Page 8
Models that include state fixed effects (a dummy variable for each survey respondent's state) rather than a variable for "swing state" (vs. not)
- Table B3 - Page 9
Models that control for partisanship (7-pt categorical variable)
- Table B4 - Page 10
A simpler model that uses CES data and only controls for basic demographics: age (+ age-squared), gender, education, race, and swing state residence.
- Table B5 - Pages 11-13
Separate models for 2016 and 2020 (rather than pooling both survey years)
- Table B6 - Page 14
Sensitivity analyses in line with the recommendations of Hazeltt and Cinelli (2020 *JRRS Series B*)
- Table B7 - Page 15
Multivariate regression model that uses 2019 ANES Pilot data to test the relationship between student loan debt and policy preferences when controlling for select demographics, party ID, and ideology.

- Table B8 - Page 16
Full model associated with Table 4 in the main paper
- Table B9 - Page 17
Full model associated with Table 5 in the main paper

Appendix A

Shows information on coding and creation for all variables used in the main paper analyses.

Detail on Variable Creation & Coding for the 2016 CES

The data and codebook for the 2016 Cooperative Election Study (CES) is available at the following link (<https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi%3A10.7910/DVN/GDF6Z0>).

The data and codebook for the 2020 Cooperative Election Study (CES) is available at the following link (<https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi%3A10.7910/DVN/E9N6PH>).

These two surveys were combined together in order to form a larger dataset (pooled 2016 and 2020 CES; valid $N \approx 100,000$) that I use for my main analyses.

On the following pages, I show how each variable (from this pooled 2016 and 2020 CES dataset) that I used in various tables was created and coded, and also show relevant (un-weighted) descriptive statistics. The italicized text refers to the CES variable name.

Variable Creation & Coding for the Pooled 2016-2020 CES

On the following pages, I show how each variable used in various tables was created and coded, and also show relevant (unweighted) descriptive statistics. The italicized text refers to the CES variable name.

- Student Loan Debt

Created from *edloan*

0 = no; 1 = yes

Mean = 0.201; Standard Deviation = 0.401; Min = 0; Max = 1

Valid observations = 104,219

- Validated Voter Turnout

Created from *CL_E2016GVM* and *CL_2020gvm*

0 = missing data which means no record of voting; 1 = record of voting

Mean = 0.597; Standard Deviation = 0.490; Min = 0; Max = 1

Valid observations = 125,600

- Display Sign

Created from

0 = did not do activity; 1 = did activity

Mean = 0.179; Standard Deviation = 0.384; Min = 0; Max = 1

Valid observations = 104,450

- Campaign Work

Created from

0 = did not do activity; 1 = did activity

Mean = 0.060; Standard Deviation = 0.237; Min = 0; Max = 1

Valid observations = 104,450

- Donate Money

Created from

0 = did not do activity; 1 = did activity

Mean = 0.271; Standard Deviation = 0.445; Min = 0; Max = 1

Valid observations = 104,450

- Age

Created by subtracting *age* from the number 2020

Ranges from 18 to 99

Mean = 48.1; Standard Deviation = 17.2; Min = 18; Max = 99

Valid observations = 125,600

- Age-squared (intended to capture curvilinear effect of age on turnout)
 - Created by multiplying Age \times Age (this value then divided by 100)
 - Ranges from 3.24 to 98.01
 - Mean = 26.134; Standard Deviation = 17.08; Min = 3.240; Max = 98.01
 - Valid observations = 125,600
- Female
 - Created from *gender*
 - 0 = male; 1 = female
 - Mean = 0.560; Standard Deviation = 0.496; Min = 0; Max = 1
 - Valid observations = 125,600
- White
 - Created from *race*
 - 0 = not White; 1 = White, non-Hispanic
 - Mean = 0.720; Standard Deviation = 0.449; Min = 0; Max = 1
 - Valid observations = 125,600
- Third Generation
 - Created from *immstat*
 - 0 = immigrant citizen/immigrant non-citizen/first generation/second generation;
 - 1 = third generation
 - Mean = 0.628; Standard Deviation = 0.483; Min = 0; Max = 1
 - Valid observations = 125,299
- Four Year College Degree
 - Created from *educ*
 - 0 = no high school diploma/high school graduate/some college/2-year degree; 1 = 4-year degree/post-graduate degree
 - Mean = 0.366; Standard Deviation = 0.482; Min = 0; Max = 1
 - Valid observations = 125,600
- Income over \$80,000
 - Created from *faminc_new*
 - 0 = less than \$10,000 - \$79,999/prefer not to say; 1 = \$80,000 - \$500,000 or more
 - Mean = 0.270; Standard Deviation = 0.444; Min = 0; Max = 1
 - Valid observations = 125,600

- Currently a Student
 - Created from *employ*
 - 0 = working full-time/working part-time/temporarily laid off/unemployed/permanently disabled/homemaker/retired/other; 1 = student
 - Mean = 0.045; Standard Deviation = 0.206; Min = 0; Max = 1
 - Valid observations = 125,566

- Married
 - Created from *marstat*
 - 0 = separated/divorced/widowed/single/domestic partnership; 1 = married
 - Mean = 0.504; Standard Deviation = 0.500; Min = 0; Max = 1
 - Valid observations = 125,513

- Homeowner
 - Created from *ownhome*
 - 0 = rent/other; 1 = own
 - Mean = 0.617; Standard Deviation = 0.486; Min = 0; Max = 1
 - Valid observations = 125,457

- Live in Residence 5+ Years
 - Created from *CC16_361* and *CC20_361*
 - 0 = less than 1 month - 3 to 4 years; 1 = 5 or more years
 - Mean = 0.604; Standard Deviation = 0.489; Min = 0; Max = 1
 - Valid observations = 125,422

- Current/Former Military Service
 - Created from *milstat_1* & *milstat_3*
 - 0 = no current nor former military service; 1 = current or former military service
 - Mean = 0.119; Standard Deviation = 0.323; Min = 0; Max = 1
 - Valid observations = 125,600

- Current/Former Union Membership
 - Created from *union*
 - 0 = never a labor union member; 1 = current or former union member
 - Mean = 0.246; Standard Deviation = 0.431; Min = 0; Max = 1
 - Valid observations = 125,390

- Weekly Church Attendance
 - Created from *pew_churatd*
 - 0 = never/seldom/a few times a year/once or twice a month/don't know; 1 = once a week/more than once a week
 - Mean = 0.245; Standard Deviation = 0.430; Min = 0; Max = 1
 - Valid observations = 123,533

- High Political Interest
 - Created from *newsint*
 - 0 = hardly at all/only now and then/some of the time/don't know; 1 = follow what's going on in government and public affairs most of the time
 - Mean = 0.498; Standard Deviation = 0.500; Min = 0; Max = 1
 - Valid observations = 125,501

- Party/Candidate Contact
 - Created from *CC16_425a* and *CC20_431a*
 - 0 = not contacted; 1 = contacted by a candidate or political campaign organization
 - Mean = 0.586; Standard Deviation = 0.493; Min = 0; Max = 1
 - Valid observations = 104,317

- Swing State
 - Created from *inputstate*
 - 0 = the other 36 states + DC; 1 = AZ, CO, FL, GA, IA, MI, NV, NH, NC, OH, PA, VA, WA, WI
 - Mean = 0.404; Standard Deviation = 0.491; Min = 0; Max = 1
 - Valid observations = 125,600

Detail on Variable Creation and Coding for the 2019 ANES Pilot

The data and codebook for the 2019 American National Election Pilot Study (ANES) is available at the following link (<https://electionstudies.org/data-center/2019-pilot-study/>). On the following pages, I show how each variable used in various tables was created and coded, and also show relevant (unweighted) descriptive statistics. The italicized text refers to the ANES variable name.

- Student Loan Debt (asked of 1/2 sample)

Created from *expcolldebt*

0 = do not have student loan debt; 1 = have student loan debt

Mean = 0.165; Standard Deviation = 0.371; Min = 0; Max = 1

Valid observations = 1,501

- Favor Loan Forgiveness

Created from *loans*

0 = oppose a great deal/oppose a moderate amount/oppose a little/neither favor nor oppose; 1 = favor a little/favor a moderate amount/favor a great deal

Mean = 0.351; Standard Deviation = 0.477; Min = 0; Max = 1

Valid observations = 2,999

- Favor Free College Tuition

Created from *freecol*

0 = oppose a great deal/oppose a moderate amount/oppose a little/neither favor nor oppose; 1 = favor a little/favor a moderate amount/favor a great deal

Mean = 0.372; Standard Deviation = 0.484; Min = 0; Max = 1

Valid observations = 2,999

Appendix B

Table B1

Table B1: Probit Model of Student Loan Debt Electoral Participation, 2016-2020

	DV = Validated Vote		DV = Display Sign		DV = Campaign Work		DV = Donate Money

Table B4

This is a simplified model meant to allay concerns that any results are due to including an unnecessarily and insufficiently justified number of controls (Lenz and Sahn 2021 *Political Analysis*). As such, I only include a small set of salient demographics that are likely to correlate with both student loan debt possession and voter turnout: age, gender, race, education, and state of residence. All coding here is dichotomous.

Table B4: Student Loan Debt and Electoral Participation When Including a Smaller Number of Control Variables, 2016-2020

	DV = Voter Turnout	DV = Display Sign	DV = Campaign Work	DV = Donate Money

Table B5

Here (Tables B5a and B5b), I replicate my main analyses (from Table 3 in the main paper) separately in each election year. In short, I run eight regression models using data from the 2016 CES and eight other regression models using data from the 2020 CES. See the following two pages for these models.

Overall, the results show that student loan debt is positively and significantly associated with electoral participation in both election years (2016 and 2020). In short, my main results do not seem to be driven by one election year, e.g., the heightened salience of student loan debt in 2020 during the Covid-era pause on repayments.

Table B6

Here (Tables B6a and B6b), I conduct a sensitivity analysis for my main results (those displayed in Table 2 in the main paper).

I use the *sensemkr* command in Stata and follow the advice from (Hazlett and Cinelli 2020 *JRRS Series B*) and the instructions that these authors provide to conduct and interpret the results obtained from running the *sensemkr* command in Stata (<https://carloscinelli.com/sensemkr/>).

I chose to use labor union affiliation, a well-established correlate of voter turnout and political participation (e.g., Flavin and Radcliff 2011 *Electoral Studies*; Kerrissey and Schofer 2013 *Social Forces*) as a baseline for the *sensemkr* analysis. By this, I mean that I used this sensitivity analysis command to estimate, in line with recommendations from Hazlett and Cinelli (2020), how much more of the variation in my dependent and main independent variable an omitted variable would have to explain than a relevant comparison variable, here that being current/former union membership (0 = no; 1 = yes).

The results of this analysis (see the bolded text in the below tables) show that an omitted variable would have to explain more than *ten times* the variation in both student loan debt and voter turnout that labor union affiliation does, in order to reduce the magnitude of the student loan debt coefficient to the point that it is no longer significantly different from zero. In short, this sensitivity analysis suggests that my results seem unlikely to be a mere statistical fluke that is exceptionally vulnerable to omitted variable bias.

CES, 2016-2020

Table B6a

“Treatment”	coef	se	t(H0)	R2yd.x	RV_q	RV_qa
Student Loan Debt	0.0558	0.0038	14.8243	0.0022	0.0454	0.0395

Table B7

This shows the relationship between student loan debt and support for two policies, canceling student loan debt (0 vs. 1) and free college tuition (0 vs. 1). This uses data from the 2019 ANES Pilot and is associated with Table 6 in the main paper.

The additional control variables that I include are: age group (Millennial/Gen Z vs. not), gender (female vs. not), race (White vs. not), education (4-year college degree vs. not), household income (over \$80,000 vs. not), party identification (Republican vs. not), and ideology (Conservative vs. not).

Table B7: Student Loan Debt and Policy Opinions, 2019		
	Favor Canceling Loans	Favor Free College Tuition
Student Loan Debt	0.281*** (0.033)	0.182*** (0.033)
Millennial/Generation Z	0.036 (0.028)	0.056** (0.028)
Female	-0.002 (0.022)	-0.042* (0.023)
White	0.015 (0.027)	-0.018 (0.028)
College	0.036 (0.025)	0.006 (0.026)
Income Over \$80,000	0.010 (0.026)	0.014 (0.027)
Republican	-0.194*** (0.031)	-0.186*** (0.033)
Conservative	-0.213*** (0.032)	-0.254*** (0.033)
Constant	0.433*** (0.030)	0.522*** (0.030)
Observations	1,446	1,446
R ²	0.215	0.214

Note: Dependent variables are dichotomous (0 = oppose/neither favor nor oppose; 1 = favor). All independent variables are also dichotomous (0 vs. 1). OLS coefficients from 2 linear probability models (probit yields very similar results) with robust standard errors in parentheses. *** p<0.01, ** p<0.05, * p<0.1, two-tailed test. Source is the 2019 ANES Pilot.
